The MSE will be used to develop a management procedure that best achieves the suite of management objectives for the U.S. Atlantic dolphin fishery. Stakeholder input is necessary for characterizing the management objectives of the fishery and stock, identifying any uncertainties in the system that should be built into the MSE analysis, and providing guidance on the acceptability of the proposed management procedures.

Agenda items for the meeting include: developing an understanding of management procedures and management strategy evaluation, developing conceptual management objectives, and clarifying uncertainties that should be addressed within the framework.
